## High Performance Programmable AC Power Source

The AFV<sup>+</sup> series is a high power programmable AC power source utilizing advanced PWM technology to deliver power with THD  $\leq 0.5\%$  and up to 2000kVA. The output frequency is 45~65Hz with accuracy of  $\pm 0.02\%$ , and user can select 45~500Hz option to expand the frequency. The AFV<sup>+</sup> series is ideal to simulate different region's voltage and frequency conditions, and can cover applications for home appliance, motor, medical equipment, lighting and EMC laboratory.

The AFV<sup>+</sup> series features STEP and RAMP programmable functions to easily simulate single or continuous output changes. Three phase independent adjustment, optional remote sensing and optional phase angle adjustment all provide convenient control to simulate different kinds of line disturbance. These features are ideal for test applications of R&D design verification, quality assurance and production checks. For remote control, the AFV<sup>+</sup> series has standard RS-232/RS-485/RS-422 interface card and optional GPIB and Ethernet interfaces for easy setup and programming.

- Wide Output Power Range: 10kVA~2000kVA.
- 0~300V output voltage and 45~65Hz output frequency (opt. 45~500Hz)
- The built-in STEP and RAMP functions are ideal to simulate different types of power line disturbances.
- The SOFT START feature can effectively reduce inrush current caused by motor startup.
- Via the Three Phase Independent Adjustment function, the AFV<sup>+</sup> series can deliver each phase voltage differently to multiple single-phase DUTs.
- User can simulate phase shift with the optional Phase Angle Control function.
- The 7" touch screen shows parameters of voltage, current, frequency, real power, apparent power and sum of each phase's parameters.
- Complete protections include UVP, OVP, OCP, input UVP/OVP, OTP and other 29 protections. The built-in Error Log can record up to 255 error messages for easier trouble shooting.
- CE & RoHS certified.
- Optional remote sensing feature is available to improve precision.

## Intuitive 7" Touch Screen

The AFV<sup>+</sup> series employs 7" touch screen to provide intuitive and easy-to-use control and display. Users can quickly access output settings and measurements, including voltage, current, frequency, real power, apparent power, PF and sum of each phase's parameters. Complex sequences and system configurations can also be easily done via the touch screen.

## Three Phase Independent Adjustment

The Three Phase Independent Adjustment function of AFV<sup>+</sup> series can simulate advanced power line disturbance, such as three-phase voltage unbalanced or lost-phase, which can further meet up with testing standard of IEC61000-4-34 (GB/T 17626-34), by setting output voltage of each phase independently. User can simply press the screen icon to switch between balanced voltage setting and independent voltage adjustment .

## Phase Angle Control (Opt.)

The AFV<sup>+</sup> series not only can set three-phase voltage independently, but also can set the phase angle between three phases via the optional Phase Angle Adjustment, for example, user can set phase angle from 120 to 70, to simulate phase shift for different power conditions.

## RAMP and STEP programming features

Preen		
NO.	VOLT (V)	FREQ.(Hz)
1	220.0	50.0
2	220.0	50.0
3	220.0	50.0
4	220.0	50.0
5	220.0	50.0
6	220.0	50.0

STEP Setting (24 sequences)

The AFV<sup>+</sup> series' RAMP feature has up to 12 sequences available with parameters of voltage, frequency and time, and the STEP feature has up to 24 sequences available with parameters of voltage, frequency and time. These features provide an easy method to simulate different kinds of power line disturbance.

## Overload capacity (Opt.)

200%	2 sec
150%	5 sec
125%	15 sec

An electric-motor-type UUT (Unit under Test), such as motor, compressor or water pump, generates great activation current when activating. As a result, users need to purchase a power supply with much higher capacity than the UUT itself. AFV<sup>+</sup> series has an optional overload capacity that can endure/ achieve 200% overload capacity, easy to activate products of electric motor type that require high activation current.

## Remote Interfaces

RS-232   RS-422   RS-485   Standard   Ethernet   GPIB   Option

For easy setup and programming, the AFV<sup>+</sup> series has standard RS-232/RS-485/RS-422 interface card. User also can select optional GPIB and Ethernet interfaces for different remote control requirements.

**Broader frequency and higher voltage**

AFV+ series can output optional frequency up to 840Hz to meet the needs of defense and aircraft industries. It can also be used for double frequency test of transformer. Moreover, AFV+ series can output up to 400V(L-N)/690V(L-L) or 600V(L-N)/1039V(L-L) (optional) for motors that need higher input voltage

**Remote Control Software:**  
**Preen Program**

The AFV+ series offers complimentary remote control software, Preen Program. This graphical user interface provides easy settings and user-friendly configurations for users to fully control the unit. The Preen Program includes GENERAL mode or PROGRAMMABLE mode with STEP and RAMP features available. The preview waveform and report functions also greatly enhance convenience for on review parameters and results before or after testing.

**Screen lock password function**

In order to prevent the operator from changing the set parameters by mistake, the new Screen Lock Password function is added on AFV+ series, so that the operator can only perform the output of the device, and only authorized personnel has the password to unlock the screen and edit parameters, which help to increase the security and effectiveness of testing.

**Remote voltage drop compensation (Opt.)**

In the factory or laboratory, there is often a certain distance in the configuration of power and load. The Remote Voltage Drop Compensation of AFV+ series is able to compensate the voltage drop caused by the cable length, so the user can avoid the inconvenience of adjusting the voltage.

**EV charger application case**

Before EV charger's ready for installation, it has to do a series of tests to ensure its reliability and safety. For example, input AC characteristic test, control signal test, performance test, safety features etc. are required test items. AFV+ series is the ideal power source to perform high quality and stable EV charger testing.
